API Documentation

We are using ' **api/v0/** ' for versioning our **API**, so that we can easily change and create a new one version for a new requirement/device.

1. Blog Create API :

1.1 This API allows you to create a new **Blog**.

Url : **127.0.0.1:8000/api/v0/createBlog/**

Request Type : POST

Description : provide Blog **title and images**.

1.2 This API allows you to get the list of all Blogs.

Url : **127.0.0.1:8000/api/v0/blogList/**

Request Type : GET

API return :

```
[
  {
    "id": 1,
    "title": "Bangladesh is the best place for living"
  },
  {
    "id": 2,
    "title": "Why i hate angular"
  },
]
```

1.3 This API allows you to get all the images of a specific blog. Here you need to provide a blog id.

Url : **127.0.0.1:8000/api/v0/blogImageList/2/**

Request Type : GET

API return :

```
[
  {
    "image":
"/BlogImage/120761026_1621146141388393_5901537728036442322_n_EgcpeFc.jpg"
  },
  {
    "image":
"/BlogImage/122285312_1271707869847550_4673606154556532040_n_bL23ro4.png"
  }
]
```
